Can't get iPublisherCentral Reader running (Windows 10) New

- Eduardo Arvizu
- **Forum name:** #Bug Report

Whenever I try to open the program, it gets stuck in the Opening window. I can even write in the copyright paragraph. Is there any solution for this? I've had this trouble for several weeks.

Hello Eduardo, Please quit the Reader completely and download and run the cleaner application through this link:

<https://ipublishcentral.deskpro.com/en/downloads/files/ipublishcentral-cleaner-v2/download>

and try launching the reader again. If the issue persists, please uninstall the reader, run the cleaner again and reinstall and the issue should be resolved.
