Content needs to be TTS accessible New

- Kari
- **Forum name:** #Suggestion

The content isn't text-to-speech (TTS) accessible. This needs to happen ASAP (basic accessibility shouldn't be ignored).

We understand your requirement but we sincerely apologize as the TTS (Text-to-Speech) functionality that you are currently looking for is not something we have built in on our mobile apps and desktop applications. Our development team is working towards getting this as a feature rolled out in the near future.

Are there any updates on adding Text to Speech to this APP? Specifically for the AHA ebooks? I am a disabilities service provider for a community college and I am trying to find out before the college purchases two ebooks for a student.
