SUPPORT FOR TEXT-TO-SPEECH FUNCTIONALITY 5.0.2 by PublishCentral

The online PDF Reader has been enhanced to provide users the option to listen to text available on a page of a PDF title, instead of reading the title. In addition to playing (reading out loud) the text, the content block that is being played will be highlighted.

Once the user clicks on the 'Read Aloud' button, the system starts reading from the first word of the page. In case, the user flips to the next page, the Read Aloud functionality automatically starts playing from the first word of the new page.
